

Domain Analysis Presentation Guideline

The problem explanation: Does the presentation include an explanation to the problem that the software is aimed at solving?

The need for the application (motivation): Does the presentation explain the need for this software? Does the presentation include a justification as to why anyone (or FDM) would use the proposed software?

How the software solves the problem: Does the presentation explain how the features of the proposed software help solving the said problem?

Personas or Roles: Does the presentation adequately explain different users of the systems?

Environment: Does the presentation include discussion on the environment of the existing applications? Does the presentation include explanation of the platform the proposed software will run on? Does the presentation include a justification of the selected environment/platform?

Competing Software: Does the presentation include explanation of the existing similar application including their pros and cons? Does the presentation include a justification for the selected existing applications?

Q&A: Did the group answer all questions adequately? I'm not sure if the FDM colleagues will ask question but I'm hoping that they will.

Marking criteria

- **Mark 5:** Every aspect of the section/question are explained/answered well and clear using the necessary domain terminology.
- **Mark 4:** Majority of the section/question is explained well but few parts (minor things) in the slides were not clear, necessary domain terminology not used or rarely used.
- **Mark 3:** Most of the section/question is adequately or briefly explained, and some parts (important things/aspects) might be badly explained and not clear at all.
- **Mark 2:** The section/question is badly explained, and most of the section content or answer is not acceptable.
- **Mark 1:** The section is there with almost no acceptable content or question is answered with a type of "we don't know at present, but we will find out" answer. In some cases, this answer is acceptable as you can't know the answer to every question however I expect you to answer the questions that are included in your slides (part of your analysis).
- **Mark 0:** Section is missing, or no answer given to the question.

Presentation Tips

- Arrive on time (get to the room before your time but your presentation might be delayed)
- Be prepared and be/act professional.
- Be enthusiastic and present with passion (it's your project after all).
- Finish your presentation on time (15 mins max for this presentation).
- Make sure all slides are clear and readable (no blurry images or text).
- Make good use of graphs and charts (better than copying and pasting a whole paragraph).

- Make sure the design, fonts and sizes are consistent throughout the presentation.
- Do not rush the slides or skip parts of the presentation.
- Answer questions calmly and professionally.
- Have the presentations and the domain document ready for Q&A so you don't look for them while answering the questions.
- Never have a "thank you" slide at the end instead have a short summary slide; your audience will be looking at that slide at least for 5 mins.
